# PADI Enriched Air Diver

Have you ever gone on a dive and still had air left in your tank, but due to your no decompression limits you had to surface? Why don't you extend your limits? Diving on enriched air nitrox (EANX) increases the amount of oxygen in your air and this in turn eliminates some of the nitrogen. All of this means that you can stay down longer and feel better. EANX is also fantastic for divers who get tired after diving.

This certification counts towards your Master Scuba Diver rating.

## Enriched Air Nitrox (EANX) Theory

There are a few considerations you need to take when using enriched air nitrox. The theory component of this course covers everything you need to know to dive safely, within your modified limits, when diving on enriched air. Over 2 evenings you will learn-

- How to plan your dive and choose the best nitrox percentage for your dive.

- How to analyse your nitrox mix
- How to verifying cylinder content data.
- How to sign the nitrox fill log

**Over 2 Dives** you will use your analysed eanx mix. There are no skills to do on these dives but you must not exceed your dive plan that you formulated on your theory nights.

**Combine  
your with  
another  
course and  
save \$100.**

## Course Dates-

## Equipment Requirements

Mask, snorkel, boots, fins, knife, torch, slate, surface marker buoy, reel.

Divers: At this level of training it is recommended that you are diving in your own scuba unit, as it is the best way for you to fine-tune your buoyancy. However if you do not have your own, rental is available.

**Course Pricing**  
\$425 or  
\$325 as  
add on
